Engine Control Systems Dpf

The Combifilter is an actively regenerated DPF system that typically removes 90+ % of PM* while reducing NO2 emissions. The system is comprised of an integrated DPF and silencer assembly, and an off-board regeneration control panel or station.

Diesel Particulate Filters (DPF) - enginecontrolsystems.com

Purifilter™ from Engine Control Systems is an integrated diesel particulate filter and silencer, which efficiently removes particulate (PM) and gaseous pollutants, CO and HC. When the exhaust passes through the micro-porous filter walls the soot particles are separated and collected.

The ECS Purifilter™ Plus hybrid diesel particulate filter incorporates electric elements with a passively regenerating Purifilter™ DPF. While the engine is in operation, the passive catalyst coated onto the Purifilter DPF allows for the oxidation of accumulated soot. Periodically, when parked, the unit can also be plugged into a

Soot and other particles from diesel engines worsen the particulate matter pollution in the air and are harmful to health. New particulate filters can capture from 30% to greater than 95% of the harmful soot. With an optimal diesel particulate filter (DPF), soot emissions may be decreased to 0.001 g/km or less.
