Mitosis And Meiosis Study Guide

Meiosis is a two-part cell division process in organisms that sexually reproduce. Meiosis produces gametes with one half the number of chromosomes as the parent cell. In some respects, meiosis is very similar to the process of mitosis, yet it is also fundamentally different from mitosis. The two stages of meiosis are meiosis I and meiosis II.

When it comes to cellular reproduction/division on the MCAT you must be very familiar with Mitosis and Meiosis. This includes what occurs in each of the phases, the products of each pathway, and the key differences between mitosis and meiosis. This MCAT study guide cheat sheet is meant to serve as a visual guide to help you understand each pathway.

Study Guide Questions. Generally compare and contrast mitosis and meiosis. Carefully compare and contrast chromosomes and chromatin. Explain the advantages/disadvantages of DNA in chromatin form, vs. chromosome form. Relate your response to the stages in the cell cycle when DNA is found in each form. What are homologous chromosomes?

The fourth of meiosis I. Telophase I is identical to mitotic telophase, except that the number of chromosomes is now reduced by half. After this phase the cell is considered to be haploid. Note however, that the chromosomes are still replicated, and the sister chromatids must still be separated during meiosis II.

Study Guide for Quiz 3.1 - Cell Division ANSWER KEY

Mitosis and Meiosis. Hi, and welcome to this video on cell replication, otherwise known as mitosis or meiosis. First, let's start with mitosis. The primary events that occur during mitosis are interphase (the cell prepares for division by replicating its genetic and cytoplasmic material). Interphase can be further divided into G1, S, and G2.
